- ✓ *Existing specs can be imported into system. Easing the cost of migration*
- ✓ *Scalable from small to large*
- ✓ *Fully customizable*
- ✓ *Support distributed storage*

Managing Technical Packaging Specifications is often a laborious challenge in any consumer products company. Large volume of Technical Packaging Specifications is hard to maintain and even harder to keep up-to-date! Specification can be changed at any time and communicating the new specifications among purchasing, packaging and manufacturing departments is no easy feat. Often times, Incorrect or outdated specifications are used and incorrect packages are produced. By the time the mistake is known, it is often costly to undo and can sometimes lead to embarrassing publicity, and even legal problems.

Today's consumer products companies need a cost-effective, easy-to-use, and easy-to-administer electronic catalogue to manage technical packaging specifications. The catalogue needs to have built-in best practises in managing specifications. And when any one specification is updated, all organizations from Purchasing to the manufacturing plants should

receive the very latest data.

Package Go! is a simple, but sophisticated packaging solution, combining both graphic and technical specification workflow approvals. Packaging professionals leads the design in Package Go! And ensured that packaging best practices are built in the system.

Easy look up and search for specs at the plant Get Up to the second latest specs.

By enabling end users to create and retrieve real-time Specifications, you can help eliminate costly packaging mistakes, streamline the Specification approval process, and ease the burden of your staff.

With quick look-up of real-time data, efficiency can be archived at the plants. Package Go! promotes smooth and effective communication between purchasing and the plant and place the very latest version of the specifications at the fingertips of the plant managers.

Package Go! Provides configurable Workflow that automates the Specification approval process

Package Go! ensures that the necessary checks and balances are in place when specifications are created or changed. It helps ensure that no unauthorized specifications go out to the plants. The integrated automated workflow is configurable to suit the unique governance model of your organization. Approval Process is automated to ensure that corporate policy is followed and corporate governance is enforced. Efficient workflow process also shortens workflow time and improves efficiency.

Centrally controlled repository and definitive source of Specifications - Easy to use, easy to maintain.

With Package Go!'s central repository, you will have an easy-to-access definitive source for Technical Specifications.

Package Go! Is designed to meet all business channel requirements

Package Go! Has been designed to effectively meet all business channel requirements, from retail to food service, from promotional to club store. Each segment has been customized to address specific channel

needs, while leveraging a common powerful packaging hierarchy.

Reporting made easy!

Package Go! Efficiently catalogs both active and inactive (archived) packing components and graphics in databases that allows for quick search capabilities. Package Go! Reports can be easily customized and exported into any spreadsheet sheet program (Excel, 1-2-3) to satisfy specific reporting requirements.

Component changes and document history are tracked!

Package Go! tracks every component change and document history. This an instrumental tool when troubleshooting issues (both technical and graphic).

Portable solution that supports off-line editing

By leveraging the Domino platform, Packaging Professional can benefit from the ease of portability. A fully functional copy of the database can be easily downloaded to individual PC or laptop. Providing a key tool while troubleshooting in the field.

Hyperlink directly to third party Digital Asset Management system.

Package Go! easily links to any third party Digital Asset Management system. Hyperlink connectivity is provided directly from specifications!

Repository for all documentations

Package Go! provides a repository for all documentation - Word, Excel, CAPE, CAD, PDF, JPEG. All can be uploaded and archived with ease.

The Perfect audit trail

Package Go! The perfect audit trail! Packaging professional can easily demonstrate and export historical data such as environmental package usage in a specific calendar year. This data can be easily audited and validated by a third party.

Leverage existing Domino infrastructure - lowering the cost of maintaining, implementation, and rollout

Package Go! can potentially reduce cost by leveraging your existing IT infrastructure and existing knowledge of your IT Staff. With Package Go!, there

is no new infrastructure to unroll. Your existing Domino expertise in-house can potentially provide infrastructure support, which means low cost in maintaining the system. The system also supports Domino Clustering and Fail over, and runs on a distributed architecture to provide optimal performance and scalable across many notes databases and servers.

Package Go! is suitable for company of all sizes. The solution can scale from a few specs to hundreds of thousands of spec. with Package Go!, you have room to grow!

Existing specs can be imported into system. Easing the cost of migration

Package Go! supports batch data imports. This helps reduce the effort and in data migration and you can be up and running with Package Go! System in the shortest time possible!

Fully customizable

The system not only is configurable, but also is also fully customizable to better fit your unique requirements.

Services and Support

Services and Support are available from Antelope Group Consulting to help you gain the business values in the shortest time possible. Available service offering includes:

- Installation/Configurations
- Data Migration
- Customization
- Training
- On-site/On-call support
